### ABSTRACT

This protocol is forked from "ARTIC amplicon sequencing protocol for MinION for nCoV-2019" by Josh Quick to adapt it to illumina sequencers.

Because the PCR products are fragmented and ligated with adapters, this protocol is not restricted to 250 PE mode of MiSeq.

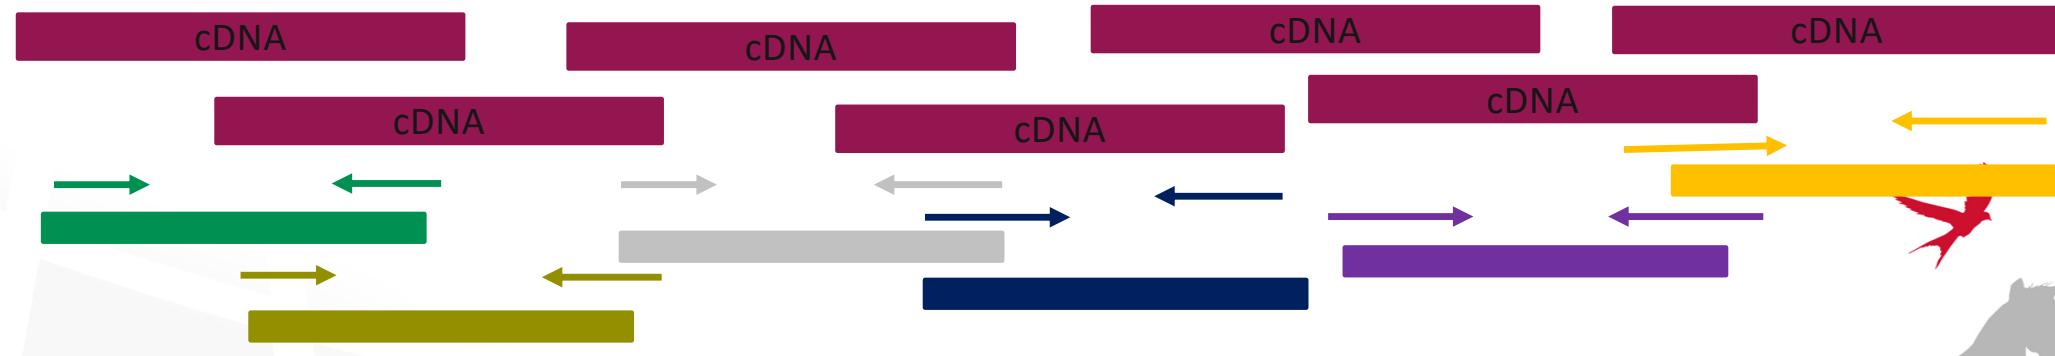

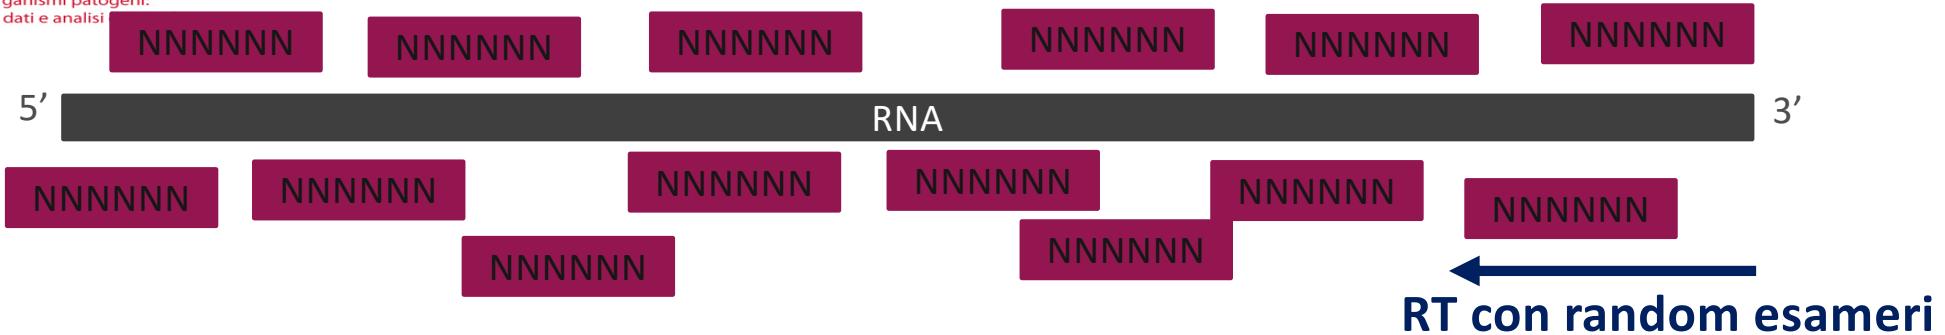

While the library preparation uses QiaSeq FX by Qiagen and is basically straight forward (as per kit instruction but set to 1/4 scale), some tweaks for much of simplicity and speed were added.
